

THE HANDS ON MINDS ON LAB QUICK TIP GUIDE

A quick and simple activity to help teachers build the confidence necessary to do more hands on labs with their students. Spark your creativity and boost your confidence to create an engaging experience.

Give Your Students the Experience of a Lifetime!:

Hands on labs are more fun, engaging and memorable. So why aren't they more widely used in the classroom?

1

BE RESOURCEFUL

What materials do you currently have in your classroom that you can leverage to creating a dynamic lab for your students?

2

GET UP AND GET MOVING

Be innovative! Think about how you can leverage the outdoors on your school grounds to take science outside of the classroom and provide your students with a new perspective.

3

COLLABORATE & CONNECT

Open up the floor for students to brainstorm ideas with you and share their desires! The more you get them to buy into the lesson the more excited they will be.

4

EMBRACE COMMUNITY

Enlist the support of parents and ask for them to donate items that you can use for labs. Don't let limited resources and funds stop you!
